2D ARRAYS SOLUTIONS

Solution 1:

Solution 2:

```
public class Solution {
   public static void main(String[] args) {
      int[][] nums = { {1,4,9},{11,4,3},{2,2,3} };
      int sum = 0;

      //sum of 2nd row elements
      for(int j=0; j<nums[0].length; j++) {
            sum += nums[1][j];
      }

      System.out.println("sum is : " + sum);
    }
}</pre>
```

Solution 3:

```
oublic class Solution {
     int[][] transpose = new int[column][row];
             transpose[j][i] = matrix[i][j];
     printMatrix(transpose);
             System.out.print(matrix[i][j] + " ");
```
